

Our Model

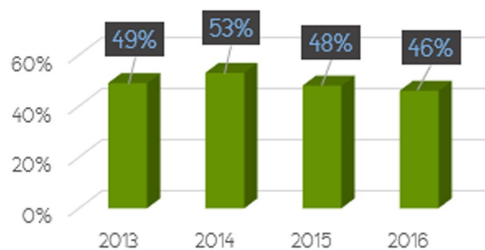

At Eyonic Systems we are dedicated to simplifying technology. Our services are a great value because they are flexible and provide on-demand scalability.

- We offer responsive technology services for people and businesses saving them time and money.
- We build our technology services to help people with any level of experience save time.

Our Carbon Footprint

To lower the environmental impact while still providing stable cloud services, a solar photovoltaic solution was implemented in September 2012 to offset energy utilization.

Power Supplied by Renewable Sources

A list of our services include:

- Network Integration
- Drive Destruction
- Online Backup
- Security Audits

Cloud Services

Online Backup
Home Users Plan

Keeping an eye on IT essentials.®

Important Features

The goal at Eyonix Systems is to provide our customers with a cloud based backup solution that runs automatically as scheduled to prevent the loss of files such as important documents, photos, music and movies.

Some of our key features are:

- * **Disaster Preparedness.** Cloud based backups protect your files from local physical and software failures as well as theft, accidental loss, and natural disasters.
- * **Multiple Devices.** Connect up to five devices to one family user account without any additional fees.
- * **Automatic Jobs.** Scheduled backup jobs run automatically after initial setup.

Features Continued

Additional features of the home version are:

- * **Security.** Data is encrypted during transit using 256-bit encryption to prevent any unauthorized access.
- * **File Versioning.** All versions of a file within the data retention period are preserved. The default data retention period is 90 days.
- * **Flexible Job Scheduling.** Backup jobs can be set to run at any time, day, and frequency.
- * **Efficient Storage & Bandwidth Usage.** Storage space is used efficiently as files are checked first and only the differences and new files and folders are uploaded to your backup account rather than all files with each backup job. This also reduces the amount of bandwidth used.
- * **Email Notifications.** Automatic job status notifications are sent once each job completes.
- * **Web Based Management.** Access to browse, open, or recover any backed up file is available at any time from any device connected to the Internet. Using your credentials, access is also available on devices without the client installed.
- * **Flexible Plan Sizes.** Plans starting as small as 25GB are available with the home user plans.
- * **Predictable Fees.** Predictable monthly or annual fees based only on the plan size.

Customer Quotes

"Traveling for work can sometimes be stressful: making sure I have all my tools, the customer information I need, scheduling my flight, and having a rental car. The one thing I don't have to worry about while I travel is backing up my files. I use my computer during the day, and at night I connect to the Internet and the software does the rest for me automatically. I don't do anything special or need to remember to bring any external devices. I connect to the Internet and no matter where I am, my files are automatically taken care of. Even if I were to lose my laptop, I could log into my account from any computer connected to the Internet and access my files. I will never go back to trying to backup my files on an external device."

"With my busy and unpredictable work schedule, it's a huge relief to know that all my information is being backed up nightly! It's worry-free for me--and just what I need!"

"When I was comparing online backup services I found all the features I wanted, and even some I didn't know about, in the Eyonix Systems service. The ability to backup files of any size, backup multiple computers without paying extra for each computer, and the ability to set up one backup job that would backup the same files on all my computers (my photos, documents, and music for example) set Eyonix apart from the others. So I installed the software from their website and the process was super easy and took about two minutes. Within 5 minutes I had set up one job to backup all the important data from both my desktop and laptop computers--and I don't have to touch it again, it just runs automatically every day and time I picked! This is by far the best backup service out there!"
